

Amendments to the Specification:

On page 6, kindly replace second paragraph with the following amended paragraph:

Still further depicted throughout the various views, hat (10) also includes an earpiece (26) that is electrically interconnected to a speaker (28) and a receiver (30). Furthermore, the earpiece (26) is attached onto the hat (10) via a hinge mechanism [[[28)]]] (50). Whereby, earpiece (26) may be conveniently folded into a concealed position within hat (10), respectively. This is also very important as this allows for individual users to position the earpiece (26) into the exact position of their liking.

On page 7, kindly replace second paragraph with the following amended paragraph:

As further depicted in figures 1-5, the electrical components can include a solar battery charger (46) and wafer batteries (48). Again, these components are only exemplary as other types of energizing means may easily be incorporated depending on engineering choice. For example, as depicted in figures 1-3, 5 & 6, (49) is an alternative type of solar battery charger and also represents an optional location therefore.
